

Dear Hiring Manager,

I am writing to express my interest in data science opportunities at your organization. With over five years of experience architecting ML systems and leading impactful initiatives across Fortune 500 environments, I bring a strong blend of technical expertise, business focus, and team leadership.

*At Walmart Global Tech, I serve as a technical lead where I spearheaded a transition to geography-based demand forecasting—delivering **multi-million dollar savings** and greater alignment between ML forecasts and operational planning. I also led the development of an **agentic AI platform** to automate hyperparameter tuning, significantly improving experimentation velocity while reducing cloud spend.*

Throughout my career, I've built and deployed large-scale forecasting systems, NLP solutions, and bias-aware models in production environments. Just as importantly, I've played a hands-on role in mentoring junior data scientists—guiding them through model development, reproducibility, and stakeholder communication. I believe in cultivating a learning culture while delivering results that drive business impact.

*I am now seeking a data science role where I can contribute as a senior individual contributor or technical lead. I am **fully eligible for visa sponsorship** and open to relocating immediately.*

Thank you for considering my application. I would be excited to bring my leadership, technical expertise, and mentoring mindset to your team. I welcome the opportunity to speak further.

Sincerely,

Meher Bhaskar Madiraju
